## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-27 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-27 of copending Application No. 10/923,214, hereafter, '214. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-27 of '214 encompass the scope of claims 1-27 of the instant invention.

Regarding claims 1-27, the instant application discloses a simulation system comprising: an event handler that is configured to determine occurrences of events, a node simulator that is configured to simulate each event to determine one or more characteristics associated with the occurrence of the event, a cache that is configured to store the one or more characteristics associated with the occurrence of select events, and a cache controller that is configured to determine whether: to invoke the node simulator to determine the one or more characteristics associated with a subsequent event or to retrieve the one or more characteristics associated with the subsequent event from the cache. Claims 1-27 of '214 disclose similar subject matter except for specifically claiming, transmission events, including "explicit-traffic packet", "tracer packet" and "background-traffic packets". However, since the aforementioned transmission events describe the claimed (see instant application) "characteristics associated with the occurrence of select events" and since select events correspond to communications from a transmitter to a receiver as described in the instant claims, it would have been obvious to one of ordinary skill in the art to modify the instant application to include specific transmission events.

Omission of element and its function in combination is obvious expedient if remaining elements perform same functions as before. In re KARLSON (CCPA) 136 USPQ 184 (1963).

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
